

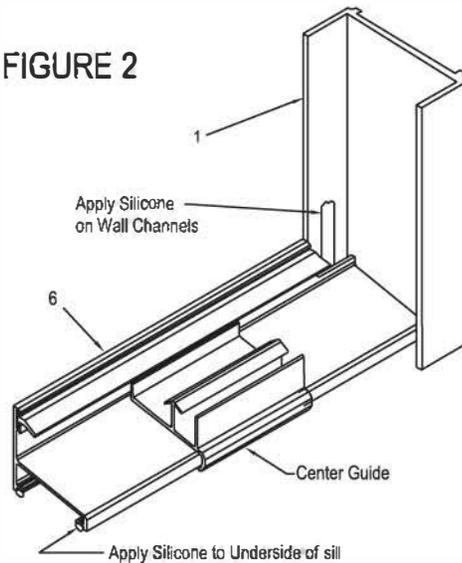

FIGURE 1

the wall meets the rim of the tub to seal the bottom of jamb. Set jambs in place and secure to the wall with #8 x 1-1/4" screws (3). Secure Bottom Bumper (4a) on showerhead/ Inside side with the bottom wall jamb screw (3).

FIGURE 2

3. Cut sill (6) to fit opening between jambs. Run a bead of silicone full length to the underside of sill (See Figure 2) and apply silicone to inside of jamb where jamb meets tub. On inside of jamb, run a 1/4" bead of silicone 1 1/4" up the outside leg of each wall jamb (See Figure 2). Set sill in place and press firmly to rim of tub. Wipe off any excess silicone before curing. Use tape to hold in place until silicone has set.

4. Cut Header (8) 1/32" to 1/16" less than opening width and set in place.

5. To set slider glass in place, hold inside slider panel inside of tub or shower pan, insert rollers up into header and lower into place. The inside slider glass has only one hole for the inside pull handle (10) and will close against the wall jamb on the showerhead side. Next, insert lower end of outside slider in front of inside slider by pushing lower ends far enough in, to allow clearance on inside edge of tub or pan. Avoid roller bracket to roller bracket contact while lifting panel into place. The outside slider will close against the jamb opposite the showerhead.

6. Place center guide (7) to center position on sill (See Figure 2). Make sure the center guide is hooked into the slot position on the sill, then snap center guide to sill.

7. Close panels and adjust to align the vertical edge of panels with jambs. Using a 1/4" box-end wrench, loosen the screws on the rollers, but don't remove completely. When screws are loose, adjust panel by sliding the screw in the slot. **Note:** When screws are loose be sure to support panel so it does not fall and break. Adjust inside slider as low as possible to reduce the gap between bottom of

roller bracket contact while lifting panel into place. The outside slider will close against the jamb opposite the showerhead.

**Note:** Apply a bead of silicone (GE1200) into the open channel of roller bracket (15) before attaching to glass. After placing roller brackets on glass, tighten screw until metal is depressed by 1/32". Allow silicone to cure for 12 hours before hanging panels.

1. Set Wall Jambs (1) in place on walls, centering bottom of jambs on rim of tub. Hold plumb and mark walls for screw holes.

2. Remove and drill 3/16" diameter holes in walls (use a carbide tipped drill bit for tile walls). Insert plastic wall anchors (2) into holes. Silicone where

9. Center hole in jamb is slotted to allow adjusting of jamb to compensate for bowed glass. After installing hardware, roll both panels into jamb on one side. If edge of glass hits on edge of jamb, loosen center screw and adjust jamb accordingly. Repeat on opposite side.

10. Secure bumpers (4) in place with a 6-32 x 1/2" MS (5). **Note:** Glass panels close into the recessed portion of the bumpers. The recess is toward the inside of the tub on the showerhead jamb, and toward the outside on the other jamb. From inside of unit, drill #31 holes through header and into wall jambs, 11/16" from bottom of header. Secure header to wall jambs with two 6 x 3/8" screws (14).

11. Silicone inside of shower where jambs meet walls and sill meets rim of tub.

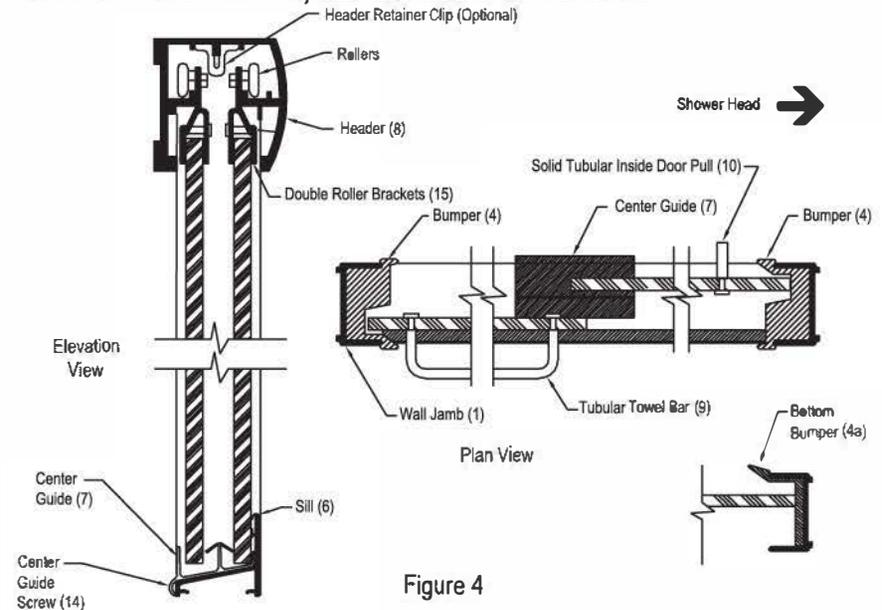

Figure 4

slider and sill taking care that the glass does not drag on the track or center guide.

8. To install towel bar (9), place nylon towel bar insert sleeves (13) into holes in the glass (17). Next, hold the tubular towel bar (9) against the hole in the glass with the nylon towel bar/pull washer (12) between the glass and the towel bar. Place a nylon towel bar/pull washer on the towel bar/pull screw (11) and secure towel bar in place on both ends. Install the pull the same way the towel bar was installed. Use hole in fastener to tighten (See Figure 3).
